Summary

Software Engineer with experience building scalable backend systems and full-stack applications in financial services, specializing in cloud infrastructure, event-driven architectures, and geospatial data platforms.

Technical Skills

Languages: C#, Python, JavaScript (Node.js, React.js), Go, SQL

Tools/Libraries: Azure, Terraform, .NET, FastAPI, NoSQL, Microsoft SQL Server, Docker, Linux

Work Experience

General Motors Financial – Software Development Engineer Mar 2025 – Present

- Built and deployed backend services supporting AML business verification workflows for GM Financial Canada, processing 300k+ applications annually in production.
- Designed and implemented RESTful APIs and Azure Functions using Cosmos DB to power scalable, event-driven workflows and asynchronous processing.
- Owned provisioning of QA infrastructure using Terraform, establishing infrastructure-as-code practices that improved environment consistency and deployment reliability.
- Diagnosed and resolved performance and reliability issues in Azure-based systems, improving application stability and operational efficiency.
- Supported onboarding of new engineers by documenting system architecture and guiding debugging and development workflows.

RapidEdge Analytics – Founding Engineer (Part-time) Apr 2025 – Feb 2026

- Architected and deployed a full-stack geospatial analytics platform using React, FastAPI, and Go, enabling dynamic, map-based data exploration.
- Designed and implemented backend services integrating external APIs (U.S. Census Bureau, TomTom) to support real-time geospatial data enrichment.
- Built asynchronous processing and caching layers to efficiently handle large geospatial datasets and reduce data retrieval latency.
- Deployed and maintained a production environment using Docker, Supabase (Postgres), and Cloudflare, configuring container networking, routing, and security.
- Led end-to-end system design, including API architecture, data modeling, and infrastructure setup for a production-ready application.

Photon – Full Stack Developer (Consultant) Oct 2024 – Mar 2025

- Designed and built an LLM-driven pipeline to generate Gherkin test scenarios from Java source code, reducing manual test case creation effort.
- Parsed and chunked code using AST-based analysis, storing embeddings in Milvus and implementing a RAG pipeline for accurate, context-aware generation.
- Delivered prototypes and technical recommendations that informed client decisions on adopting AI-driven testing solutions.

Buxtonco – Data Analyst Jun 2024 – Oct 2024

- Developed analytics solutions using consumer and geospatial data to support site selection and marketing strategies, generating insights that informed store placement and customer targeting.
- Delivered client-facing analyses and recommendations adopted by companies including BioLife and Red Wing Shoes to guide location planning, marketing campaigns, and engagement strategies.

Citigroup – PBWMT Summer Analyst Jun 2023 – Aug 2023

- Developed and automated a data integration pipeline using Impala and AutoSys to process 20k+ records daily into HDFS, improving data ingestion reliability and efficiency.
- Contributed to the development of a document scanning and OCR application, streamlining the credit card application process and reducing manual data entry.

Education

Bachelor of Science in Computer Engineering, The University of Texas at Arlington
